

ZEMS Sdn Bhd is a Singapore-based engineering and technology company delivering intelligent building automation, industrial automation, smart controls, energy management, and AI-driven optimisation solutions. Since starting as a turnkey project delivery company in 2020, Zealcorps has grown into a system integrator, energy management solutions provider, and predictive AI solutions company focused on smarter, more sustainable facilities.

With 15+ years of industry expertise, ISO 45001 certification, bizSAFE Star certification, and a dedicated in-house engineering team, Zealcorps has delivered successful projects across commercial, residential, institutional, semiconductor, data centre, hospitality, transport, defence, and industrial sectors. Our capabilities cover PLC/DDC control systems, SCADA graphics, BMS network architecture, field device integration, chiller plant optimisation, energy dashboards, reporting, commissioning, plant control systems, process monitoring, data acquisition, and plant-to-plant connectivity.

Key project references include Anchorvale Village HDB, Sofitel Resort & Spa, Raffles Villa @ Sentosa, Singapore American School, Synthesis Tower, Fusionopolis, Ngee Ann Polytechnic, Changi Airport Cargo Terminal SATS, BMS projects for LTA depot facilities, and BMS works for defence and airbase projects.

Through ZEMS.AI, Zealcorps helps clients convert operational and energy data into actionable insights, reduce wastage, improve performance, detect anomalies early, and support ESG goals with measurable energy savings

## AI-Driven Optimisation for Industrial Facilities using ZEMS.AI

Our sharing will show how industrial facilities can use existing operational and energy data to reduce wastage, improve efficiency, and support sustainability goals without major infrastructure replacement. Using data from meters, BMS, SCADA, PLCs, sensors, and production systems, ZEMS.AI applies AI analytics, demand forecasting, abnormal consumption detection, automated reporting, and optimisation recommendations to identify inefficiencies and create measurable improvement opportunities for facility and operations teams across diverse industrial environments efficiently.
